# microSURE™

ANTIMICROBIAL PROTECTION

“ **Founded on clinical expertise** ”

microSURE™ is the unique result of a 15-year-long research and development process by our group of experts in the field of material science and biotechnology to develop an antimicrobial solution that protects human skin and multiple diverse surfaces, including air handling systems.

**Continuously protecting**  
against harmful pathogens  
that cause disease.

On hard & soft surfaces  
**apply every 90 Days**

On hand & skin  
**apply every 8 Hours**

On fabrics & garments  
**375 domestic washes**

# Mechanical Kill Technology

No need for harmful chemicals

microSURE™ adopts a mechanical kill method that does not require toxic chemicals to destroy various types of microorganisms unlike harsh chemical disinfectants.

## ECO FRIENDLY

- BLEACH FREE
- CHEMICAL FREE
- ALCOHOL FREE
- FRAGRANCE FREE
- EFFECTIVE PROTECTION

## Lots of ways to apply

microSURE™ can be applied in a variety of ways depending on your sanitising requirements including:

Hand Trigger Spray, Pump Spray, Aerosol Spray and also via Electrostatic Spray equipment for larger areas.

**“We cannot continue sanitising the world with harmful chemicals.”**

## **microSURE™** Protectant Products are chem-free

microSURE™ products are different. We have created a surface technology that is beyond the traditional short term chemical approach. When a surface is coated with microSURE™, millions of "invisible" nanoscopic crystalline-like structures begin forming and bonding (with the surface), effectively forming a new surface that is hostile to the cells of a biothreat. This newly mechanically modified surface prevents adhesion, disrupts microbial communication and prohibits colonization, reproduction and proliferation.

## **microSURE™ APPLICATIONS**

Buildings
